

Product Development with Scrum

XP San Diego

January 6, 2005

By Paul Hodgetts, Agile Logic www.AgileLogic.com

Introductions

- **Solutions for Delivering Your Projects:**
 - Agile Process Adoption Solutions
 - Coaching, Consulting, Mentoring Services
 - Training in Agile Processes, Software Development and Enterprise Technologies
 - Turn-Key Software Development
- **Fullerton, CA, based**
- **Founded 2001 by industry veterans**
- **Contact info: www.agilelogic.com (866) 64-AGILE**

Paul Hodgetts

- Team coach, trainer, consultant, developer
- Founder and CEO of Agile Logic
- 22 years overall, 5 years agile experience
- Certified ScrumMaster Trainer
- Innovator in Agile business and project management
- Author (Extreme Programming Perspectives)
- Presenter at conferences (ADC, XPAU, JavaOne)
- Agile Alliance Program Director
- Member of CSUF agile advisory board
- Contact info: phodgetts@agilelogic.com

Process Improvement

- *“Improving the way we do things around here.”*
- *Not “doing a process” for its own sake*
- *Increasing our capability to deliver software*

Most development is chaotic

- *Code and fix*
- *Short term decisions*
- *Does not scale*
- *Increasing debt*
 - *Quality, design, integration, knowledge*

Some Development is Bureaucratic

- Complex
- Mandated activities
- High overhead
- Long release cycles
- Inability to keep up with business needs

Options for Process Improvement

■ *“Heroic” Approach*

- Relies heavily on individual effort
- Difficult to plan, results unreliable
- High risk of failure
- Heavy human cost

Options for Process Improvement

- *“Formal” Methodologies*
 - Detailed, bureaucratic process
 - Engineering/construction-style planning – predictive of activities
 - Expensive, time-consuming to implement
 - Limited success, not popular with teams

Options for Process Improvement

- *“Agile” Methodologies*
 - Just enough process
 - Adaptive rather than predictive
 - People-oriented focus to the process
 - Faster and less-costly to implement

What Exactly Is an “Agile” Process?

- *Focus on adaptability and responsiveness*
- *Built around core strategies:*
 - Iterative and Incremental Development (IID)
 - Adaptive project management
 - Collaborative, “whole team” approach
 - Common shared vision and goals
- *Constructed from “best practices”:*
 - Emphasis on simplicity, lightness, communication, self-directed teams, quality and technical excellence

The World of Agile Processes

- *Scrum*
- *Extreme Programming (XP)*
- *Feature-Driven Development (FDD)*
- *DSDM (Dynamic System Development Method)*
- *Crystal Family of Processes, e.g. Crystal Clear*
- *Lean Software Development*
- *Adaptive Software Development (ASD)*
- *Others: MSF Agile, Agile UP/RUP, Evo, Win-Win Spiral*

The Agile Alliance

- 2001 – representatives from agile processes meet in Snowbird, Utah.
- Agreed on a “manifesto” of values and principles:
 - Individuals and interactions over processes and tools
 - Working software over comprehensive documentation
 - Customer collaboration over contract negotiation
 - Responding to change over following a plan
- **“That is, while there is value in the items on the right, we value the items on the left more.”**

What in the World is “Scrum?”

Why Scrum?

- *Develops software in incremental steps*
- *Requires delivery of completed software*
- *Works with your instincts and expertise*
- *Focuses combined power of team*
- *Incorporates learning and adaptation*
- *Easy to learn*
- *Facilitates incremental adoption*
- *Scrum is low risk to implement*

Scrum is all about Common Sense.

The Zen of Scrum

- **Scrum is simple**
 - *Small number of practices*
 - *Practices are straightforward*
- **Scrum is hard**
 - *Requires involvement and common sense*
 - *Requires constant inspection and adaptation to project realities*
- **Scrum is subtle**
 - *Practices are synergistic*
 - *Higher-level benefits emerge*

Scrum History

- *1993 – Ken Schwaber at ADM developed cycle framework*
- *1994 – Jeff Sutherland at Easel defined Scrum*
- *Ken and Jeff work together to refine Scrum*
- *1996 – IDX scales Scrum to ~ 600*
- *1996 – Scrum published at OOPSLA*
- *2000 – XP practices used within Scrum framework*
- *2003 – ScrumMaster certifications*

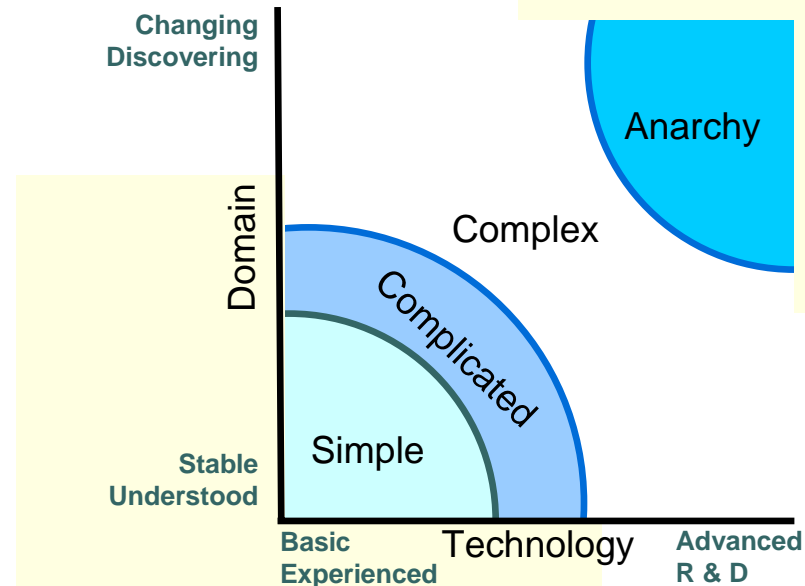

Scrum Projects

- *Scrum has been used on 1,000s of projects*
- *Types of applications:*
 - Financial, FDA life-critical, government, shrink-wrap, enterprise workflow, biotech, embedded real-time, internet e-business
- *Some well-known organizations:*
 - Primavera, Yahoo!, PayPal, Nike

Project Complexity

■ *Three dimensions of complexity*

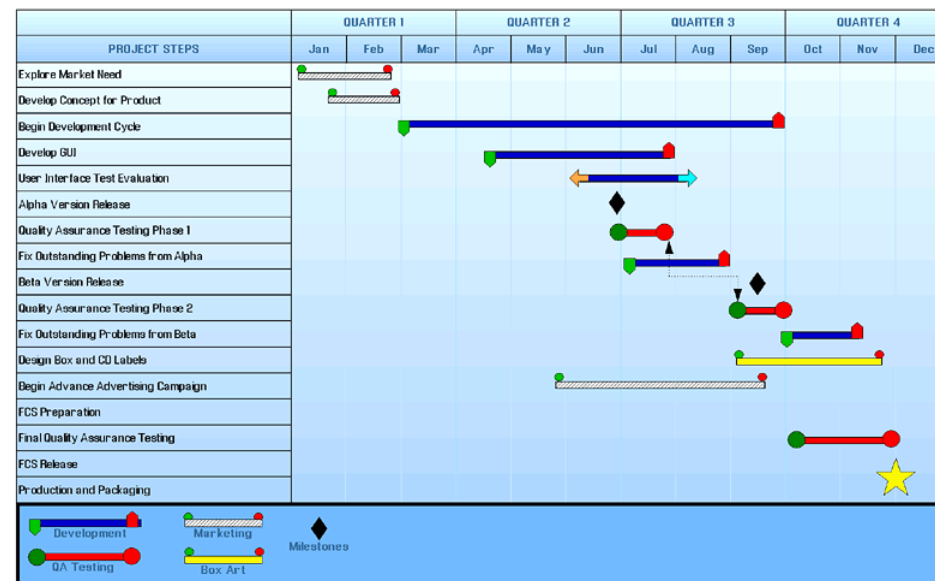

- Domain
- Technology
- People
- Just about all projects these days are complex

Defined, Predictive Process Control

- *Predict and plan expected activities*
- *Management by controlling activities per plan*
- *Change is minimized and managed via change control*

Project Development Schedule

Why Empirical Process Control?

- *Ad Hoc control works for low precision problems*
- *Defined control can bring precision into play*
- *Complex problems are not predictable, change is common*
- *Defined control breaks down under unpredictability*
- *Empirical control manages complexity*

Empirical Process Basics

■ *Visibility*

- Important aspects must be visible
- Realistic and true

■ *Inspection*

- Frequent inspection
- Ability to assess

■ *Adaptation*

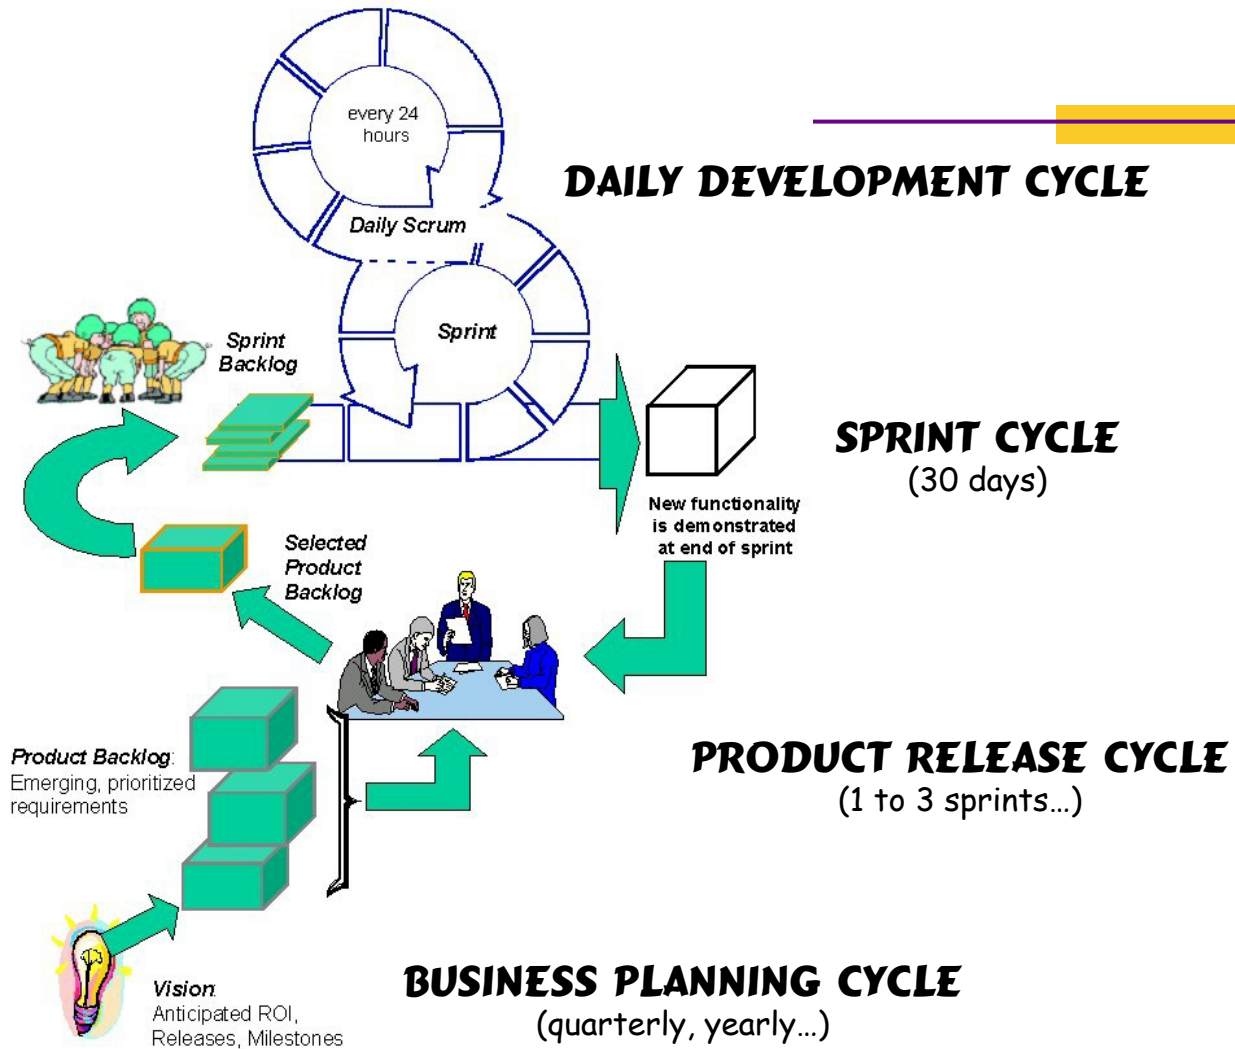

- Monitor for out-of-band results
- Quick adjustments

Pair Dialogue – Empirical vs. Defined

- Pair up with someone different, turn to each other and share short answers to the following:
 - What are the problems you see with the predictive, defined approach?
 - How does your project team deal with them now?
 - What might be a better way to solve them?

The Scrum Process Structure

The Context of Scrum

- Business cycles define overall goals
- Product cycles define product releases
- Context provides vision for development
- Context not specifically part of defined Scrum

The Framework of Scrum

- *Iterative, incremental framework*
- *Each iteration driven by product needs*
- *Team selects target functionality for increment*
- *Iterations have a fixed timebox*
- *Each iteration produces completed product increments*
- *Two nested cycles – Sprint and Daily*

The Core of Scrum

- *Within an iteration*
- *Team determines how to build the increment*
- *Daily inspection and adaptation*
- *Creative process exploited within the core*

THE "WHOLE TEAM"

BUSINESS TEAM

STAKEHOLDERS
END USERS
MANAGEMENT
OWNERS/B.O.D.
MARKETING/SALES
CUSTOMER SUPPORT
TRAINING

PRODUCT OWNER
PRODUCT MANAGER
BUSINESS ANALYST

DEVELOPMENT TEAM

PROGRAMMERS
ARCHITECTS & DESIGNERS
TECHNICAL LEADS
QA / TESTERS
IA / UI DESIGNERS
DATABASE DESIGNERS / DBAS
TECHNICAL WRITERS
NETWORK ENGINEERS
HARDWARE DESIGNERS

SCRUMMASTER
ADMINISTRATIVE
PROCESS

The Roles in a Scrum Project

- *ScrumMaster*

- Facilitator and coach

- *Product Owner*

- Manages product vision and ROI

- *Development Team*

- Realizes the product plans

- *External Roles*

ScrumMaster

- *Knows Scrum philosophy and practices*
- *Works to ensure team stays on-process*
- *Facilitates work of Product Owner and Development Team*
- *Protects the team from impediments*
- *Personal commitment to the team*
– *the “sheepdog”*

Product Owner

- *Represents the interests of the stakeholders*
- *Collaborates daily with the Development Team*
- *Communicates product requirements*
- *Prioritizes requirements based on business value and risk*
- *Uses “sushi” technique to stage completed business value*
- *Inspects increments*

Development Team

- *Cross-functional team builds and completes increments*
- *Team estimates cost and communicates trade-offs*
- *Team mutually commits to Sprint backlog*
- *Team self-organizes and self-manages tasks*
- *Team is responsible for standards and practices*

External Roles

- *External roles have minimal direct involvement*
- *Process issues interface via ScrumMaster*
- *Product issues interface via Product Owner*
- *Team is responsible for status and demonstrations*

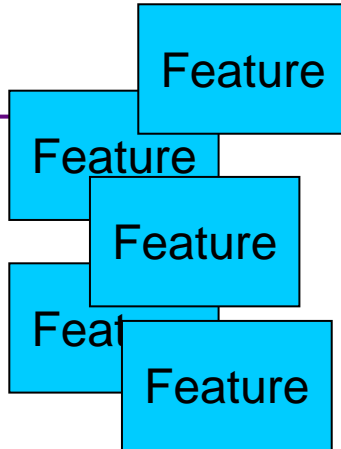

IDEA

PRODUCT PLANS & STRATEGIES

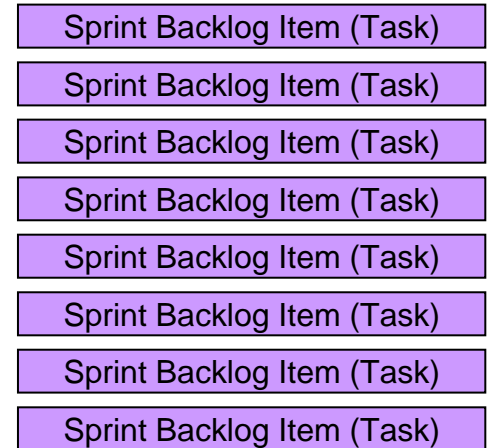

FEATURE SETS & FEATURES

PRODUCT BACKLOG

SPRINT BACKLOG

PROJECT ARTIFACTS

SOURCE CODE
DOCUMENTATION
TESTS
DATABASE SCHEMA
EXECUTABLES
ETC., ETC., ETC...

POTENTIALLY SHIPPABLE INCREMENT OF PRODUCT

Artifacts of a Scrum Project

■ *Product Backlog*

- Owned by Product Owner
- Captures product requirements
- Prioritized by business value and risk
- Supports coarse-grained estimating and planning

Product Backlog

Story	Priority	Estimate
User browses product category list	M	2.0
User selects & browses product category	M	2.0
User views product details	M	1.0
User adds product to shopping cart	M	1.0
User views shopping cart	M	1.0
User starts check out, reviews order	M	1.0
User enters shipping info	M	1.0
User pays by credit card - simple case	M	2.0
User enters separate billing address	S	1.0
System validates payment with service	M	3.0
System save user profile for later order	S	2.0
User enters CV number	S	1.0
System displays order summary	S	1.0
User searches for product key words	S	3.0

Artifacts of a Scrum Project

■ *Sprint Backlog*

- Owned by Development Team
- Captures team implementation strategy
- Supports fine-grained tracking

Sprint Backlog

Date logged	RFA	Description	Remaining Effort in Days															
			2/11/2002	2/18/2002	2/25/2002	2/28/2002	2/27/2002	2/28/2002	3/1/2002	3/2/2002	3/3/2002	3/4/2002	3/5/2002	3/6/2002	3/7/2002	3/8/2002	3/9/2002	3/11/2002

26-Feb-2002	4	Torque/Struts/CPM OM prototype				2	2	1	0	0	0	0						
27-Feb-2002		Implement Business Entity Type UI					2	2	2	2	2	1	0	0	1	0		
27-Feb-2002	1	Define Access Group UI and workflow					1	1	1	1	1	1	1	1	1	0		
4-Mar-2002		BE Session façade				7	6	5	5	5	5	5	5	5	5	5		
7-Mar-2002	4	Torque Blob Problem														4	1	
8-Mar-2002	1	Deploy admin UI on WAS 3.5															1	

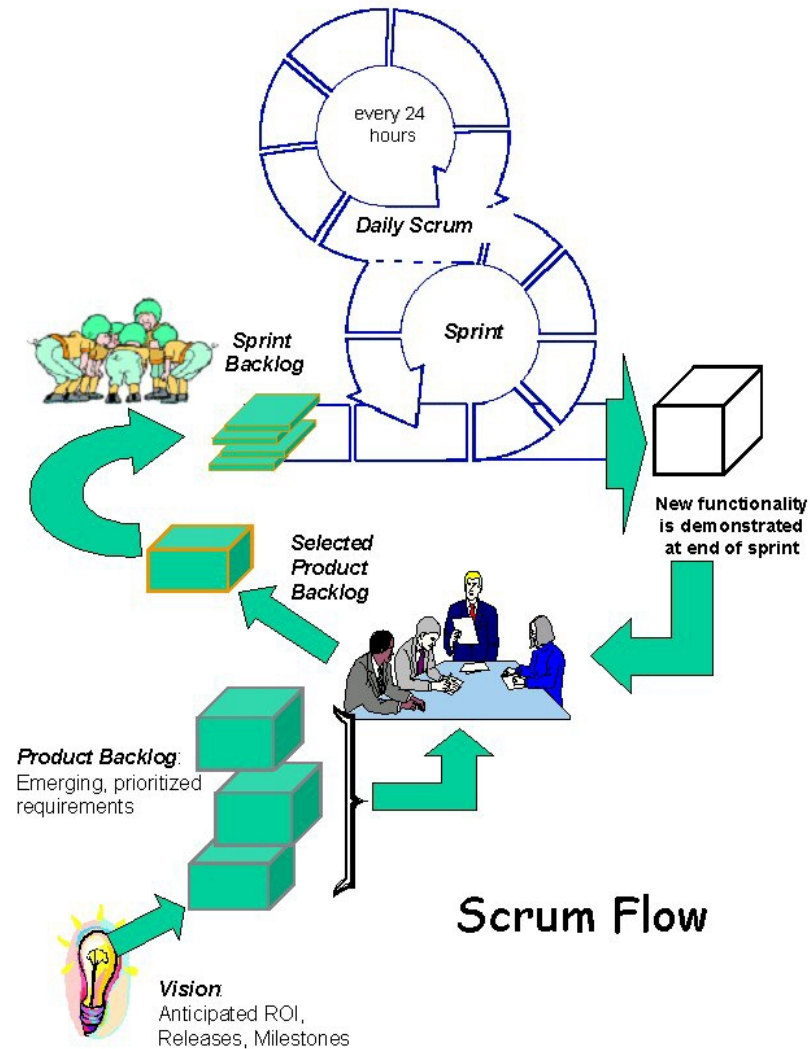

Artifacts of a Scrum Project

- *Product Increment*

- Owned by everyone
- “Complete” and potentially shippable system
- The ultimate measure of progress

Scrum Process Flow

Product Vision

- *Organization identifies overall project goals*
- *Organization devises overall product strategy to meet goals*
- *Organization defines investment and resource commitments*

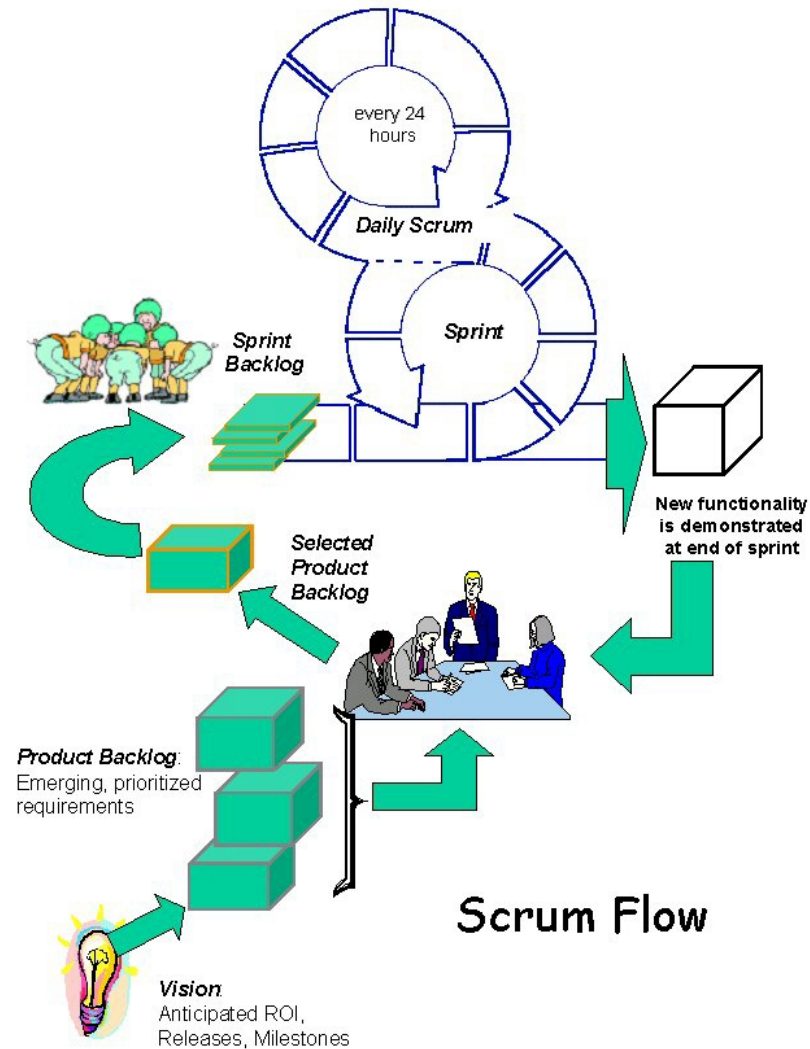

Scrum Process Flow

Develop Product Backlog

- *Product Owner plans and defines features sets*
- *Product Owner builds feature definitions*
- *Product Owner identifies Product Backlog items*
- *(Development Team estimates Product Backlog)*
- *(Product Owner prioritizes Product Backlog)*

Scrum Process Flow

Scrum Flow

Sprint Planning

- *ScrumMaster, Product Owner, Development Team*
- *Typically about one day in duration*
- *Product Owner arrives with prepared Product Backlog*
- *Two parts – Select Backlog for Sprint, Sprint Backlog Planning*

Select Backlog for Sprint

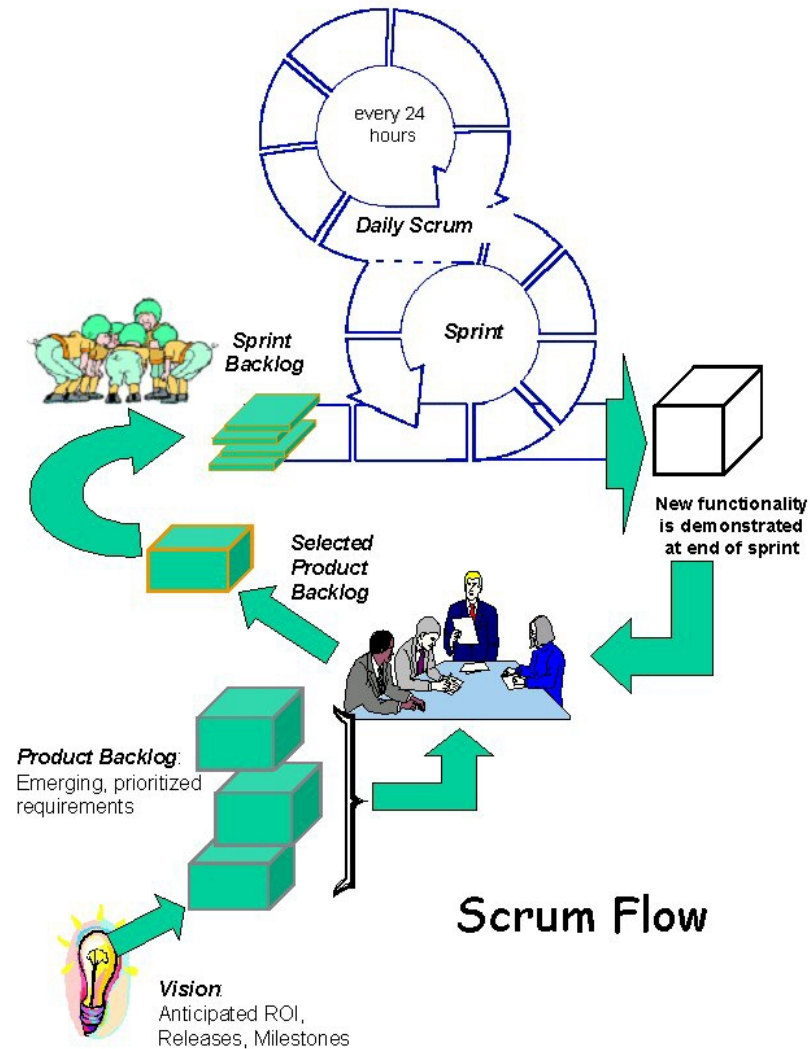

- *Typically about a half-day in duration*
- *Product Owner and Development Team discuss Product Backlog items*
- *Product Owner and Development Team choose target Backlog items for Sprint*
 - Team agrees on “theme” for Sprint
 - Product Owner prioritizes on importance
 - Development Team estimates and commits

Sprint Backlog Planning

- *Typically about a half-day in duration*
- *Development Team explores each Sprint Backlog item in more detail*
- *Development Team devises strategies for building Sprint Backlog Items*
- *Development Team builds Sprint Backlog*
 - Tasks, task estimates
 - Development team determines implementation plan
 - Initial task assignments
 - Sufficient to gain mutual commitment and start Sprint

Scrum Process Flow

Scrum Flow

Daily Scrum

- *First thing in the day, all team members required to attend*
- *Typically about 15 minutes in duration*
- *Round robin, each team member answers three core questions:*
 - What did I accomplished over the past day?
 - What will commit to working on today?
 - What does the team need to know about?
 - Obstacles preventing progress?
 - Need to collaborate with others?
 - Important discoveries and learning?
- *Additional conversations arranged for after the meeting*
- *Non-team members may observe, but not participate*

Sprint

- *Team can seek outside advice, help, information, support*
- *No direct advice, instructions, commentary, direction from outside the team*
- *Product Backlog for Sprint remains stable during Sprint*
- *Team works on and completes Backlog items*
- *Development Team adjusts strategies and tasks as needed*
- *Team updates Sprint Backlog tracking during the Sprint*

Engineering Practices

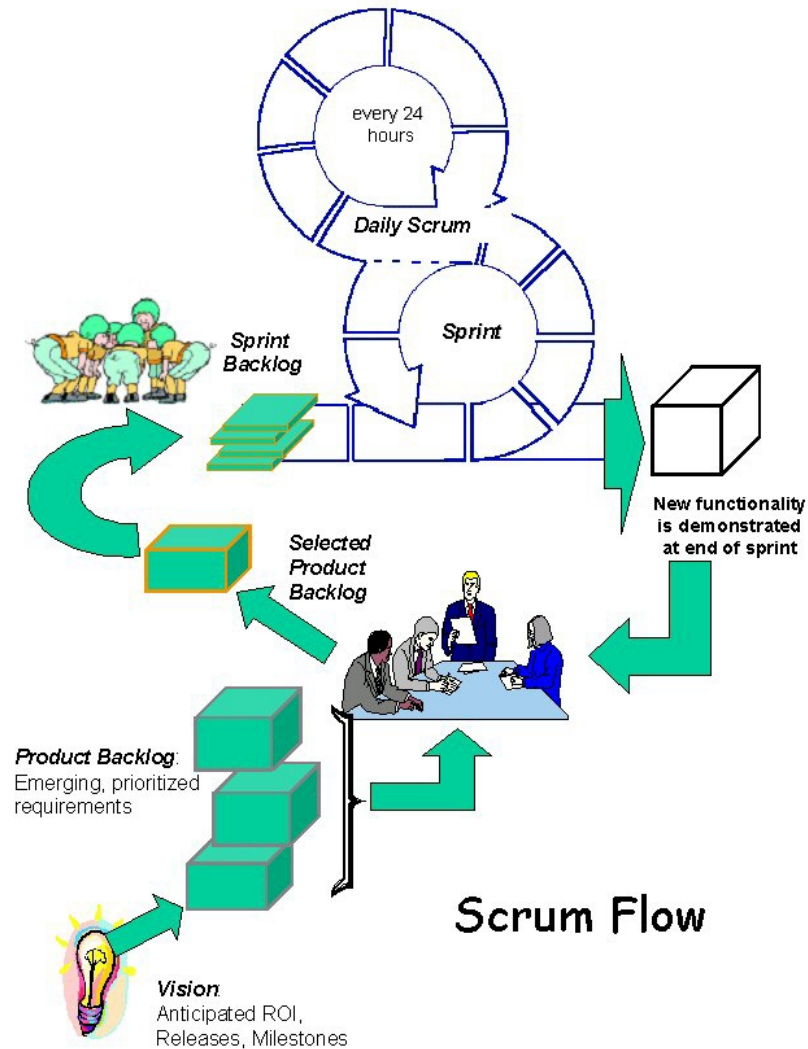

- *Standards – design, coding, “sane subsets”*
- *Source code management*
- *Engineering and functional testing*
- *Design improvement – refactoring*
- *Frequent integration*
- *Automated builds and configuration management*
- *Collective code stewardship*
- *Collaborative work environment*

What Does “Complete” Mean?

- *Code is written and compiles*
- *Code is unit tested*
- *Code adheres to standards, is clean and refactored*
- *Code is checked-in and builds*
- *Backlog item is functional tested*
- *System is regression tested*
- *Installation and deployment is ready*
- *Documentation, training is ready*

Scrum Process Flow

Scrum Flow

Sprint Review

- *Typically about a half-day in duration, minimal preparation*
- *Development Team presents completed increment to Product Owner and stakeholders*
- *Incomplete Backlog items are not presented*
- *System should be deployed on a QA server*

Sprint Review

- *Review Sprint goals, answer questions*
- *Stakeholders polled for comments*
- *Product Owner, stakeholders, Development Team discuss and make Product Backlog adjustments*
- *Next Sprint review scheduled*

Sprint Retrospective

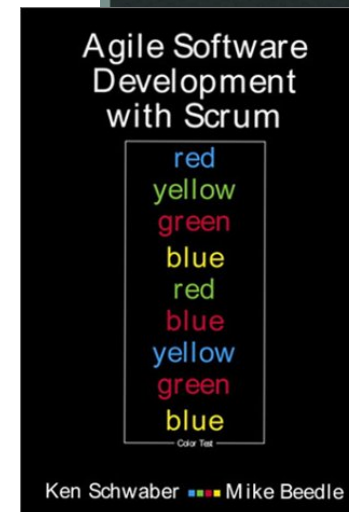

- *Typically less than a half-day in duration*
- *ScrumMaster, Development Team, Product Owner only*
- *Each team member answers two questions:*
 - What went well during the Sprint?
 - What could be improved for the next Sprint?
 - SAMOLO - Same As, More Of, Less Of
- *ScrumMaster records answers and summarizes*
- *Team prioritizes improvement issues*
- *Team creates Sprint Backlog action items for next Sprint*

Delivering Releases

- *Latest completed Sprint increment used*
- *Stabilization Sprints may be needed*
- *Hold reviews with key users after release*

What's Next?

■ *Project Initiation Plan*

- Present project vision, goals, timelines
- Define Product Backlog for at least three months
- Teach Sprint planning
- Brainstorm about overcoming impediments
- Brainstorm about Product Backlog for next Sprint - team commits
- Team defines Sprint Backlog
- Teach daily Scrum, Sprint review, Sprint signature, and management
- Discuss engineering tools and practices

ScrumMaster Responsibilities

- *Removing the barriers between development and the customer so the customer directly drives development;*
- *Teaching the customer how to maximize ROI and meet their objectives through Scrum;*
- *Improving the lives of the development team by facilitating creativity and empowerment;*
- *Improving the productivity of the development team in any way possible; and,*
- *Improving the engineering practices and tools so each increment of functionality is potentially shippable.*

Tracking and Reporting

- *Current status*
- *Progress towards releases*
- *Changes in plans and why*
- *Issues and actions to improve*
- *Big Visible Charts and Project Dashboards*

Tracking and Reporting

Product Backlog Tracking

	Item #	Description	Est	By
Very High				
	1	Finish database versioning	16	KH
	2	Get rid of unneeded shared Java in database	8	KH
		- Add licensing	-	-
	3	Concurrent user licensing	16	TG
	4	Demo / Eval licensing	16	TG
		Analysis Manager		
	5	File formats we support are out of date	160	TG
	6	Round-trip Analyses	250	MC
High				
		- Enforce unique names	-	-
	7	In main application	24	KH
	8	In import	24	AM
		- Admin Program	-	-
	9	Delete users	4	JM
		- Analysis Manager	-	-
	10	When items are removed from an analysis, they should show up again in the pick list in lower 1/2 of the analysis tab	8	TG
		- Query	-	-
	11	Support for wildcards when searching	16	T&A
	12	Sorting of number attributes to handle negative numbers	16	T&A
	13	Horizontal scrolling	12	T&A
		- Population Genetics	-	-
	14	Frequency Manager	400	T&M
	15	Query Tool	400	T&M

Tool Support

■ ScrumWorks (www.ScrumWorks.com)

The screenshot displays the ScrumWorks software interface, which is used for managing a Scrum team's backlog and sprints. The interface is divided into several main sections:

- Committed Backlog:** A table listing tasks and their estimated hours and effort. It includes sub-sections for different releases (1.1 OEM, 1.2) and sprints. A note indicates one sprint is "Over Backlog Capacity".
- Uncommitted Backlog:** A table for tasks that are not yet committed to a sprint, organized by release (1.1 OEM, 1.2, 2.0).
- Sprint Detail:** A window showing a specific sprint's goals, a burndown chart, and a detailed list of tasks with assigned team members and hours left.
- Impediments:** A table listing any obstacles that might hinder the team's progress, including dates, summaries, and assigned team members.

At the bottom of the interface, there is a note: "For an accurate sprint burndown chart, use this page to revise sprint task estimates daily."

What to Expect?

- *Initial progress will likely be slower than anticipated*
- *The process will quickly reveal constraints*
- *Team will take time to learn how to self-organize*
- *You will want to tell the team how to solve problems*
- *You will need encourage visibility and transparency*
- *Team may have difficulties focusing on daily plan*

Typical “Process Smells”

- Loss of rhythm
- Too much involvement from external roles
- Team members missing in action
- Persistent unpredictability or fluctuations
- ScrumMaster is assigning work
- ScrumMaster is focus of Daily Scrum
- Unhealthy specialization or ownership
